

Mars Exploration

Problem | Submissions | Leaderboard | Discussions | Editorial

A space explorer's ship crashed on Mars! They send a series of SOS messages to Earth for help.

Letters in some of the SOS messages are altered by cosmic radiation during transmission. Given the signal received by Earth as a string, s , determine how many letters of the SOS message have been changed by radiation.

Example

$s = \text{'SOSTOT'}$

The original message was SOS SOS. Two of the message's characters were changed in transit.

Function Description

Complete the marsExploration function in the editor below.

marsExploration has the following parameter(s):

- string s : the string as received on Earth

Returns

- int: the number of letters changed during transmission

Input Format

There is one line of input: a single string, s .

Constraints

- $1 \leq \text{length of } s \leq 99$
- $\text{length of } s \bmod 3 = 0$
- s will contain only uppercase English letters, $\text{ascii}[A-Z]$.

Sample Input 0

```
SOSSPSSQSSOR
```

Sample Output 0

```
3
```

Explanation 0

$s = \text{SOSSPSSQSSOR}$, and signal length $|s| = 12$. They sent 4 SOS messages (i.e.: $12/3 = 4$).

```
Expected signal: SOSSOSSOSSOS
Recieved signal: SOSSPSSQSSOR
Difference:      X  X  X
```

```
1  import java.util.*;
2
3  class Result {
4      public static int marsExploration(String s) {
5          String msg = "SOS";
6          int count = 0;
7
8          for (int i = 0; i < s.length(); i++) {
9              if (s.charAt(i) != msg.charAt(i % 3))
10                 count++;
11          }
12          return count;
13      }
14  }
15
16  public class Solution {
17      public static void main(String[] args) {
18          Scanner sc = new Scanner(System.in);
19          String s = sc.next();
20
21          System.out.println(Result.marsExploration(s));
22      }
23  }
```
