

28. Find the Index of the First Occurrence in a String

Easy Topics Companies

Given two strings `needle` and `haystack`, return the index of the first occurrence of `needle` in `haystack`, or `-1` if `needle` is not part of `haystack`.

Example 1:

Input: `haystack = "sadbutsad", needle = "sad"`
Output: `0`
Explanation: "sad" occurs at index 0 and 6. The first occurrence is at index 0, so we return 0.

Example 2:

Input: `haystack = "leetcode", needle = "leeto"`
Output: `-1`
Explanation: "leeto" did not occur in "leetcode", so we return -1.

Constraints:

- `1 <= haystack.length, needle.length <= 104`
- `haystack` and `needle` consist of only lowercase English characters.

Code

Java Auto

```
1 class Solution {
2     public int strStr(String haystack, String needle) {
3         for (int i = 0; i <= haystack.length() - needle.length(); i++) {
4             if (haystack.substring(i, i + needle.length()).equals(needle))
5                 return i;
6         }
7         return -1;
8     }
9 }
```
