

1408. String Matching in an Array

Easy Topics Companies Hint

Given an array of string `words`, return all strings in `words` that are a **substring** of another word. You can return the answer in **any order**.

Example 1:

Input: `words = ["mass", "as", "hero", "superhero"]`

Output: `["as", "hero"]`

Explanation: "as" is substring of "mass" and "hero" is substring of "superhero".
["hero", "as"] is also a valid answer.

Example 2:

Input: `words = ["leetcode", "et", "code"]`

Output: `["et", "code"]`

Explanation: "et", "code" are substring of "leetcode".

Example 3:

Input: `words = ["blue", "green", "bu"]`

Output: `[]`

Explanation: No string of words is substring of another string.

Constraints:

- $1 \leq \text{words.length} \leq 100$
- $1 \leq \text{words}[i].\text{length} \leq 30$
- `words[i]` contains only lowercase English letters.
- All the strings of `words` are **unique**.

Code

Java Auto

```
1
2 import java.util.*;
3
4 class Solution {
5     public List<String> stringMatching(String[] words) {
6
7         List<String> result = new ArrayList<>();
8
9         for (int i = 0; i < words.length; i++) {
10
11             for (int j = 0; j < words.length; j++) {
12
13                 if (i != j && words[j].contains(words[i])) {
14                     result.add(words[i]);
15                     break;
16                 }
17             }
18         }
19
20         return result;
21     }
22 }
```
