1672. Richest Customer Wealth

EasyTopicsCompaniesHint

You are given an $m \times n$ integer grid `accounts` where `accounts[i][j]` is the amount of money the i^{th} customer has in the j^{th} bank. Return the **wealth** that the richest customer has.

A customer's **wealth** is the amount of money they have in all their bank accounts. The richest customer is the customer that has the maximum **wealth**.

Example 1:

Input: `accounts = [[1,2,3],[3,2,1]]`
Output: 6
Explanation:
1st customer has wealth = 1 + 2 + 3 = 6
2nd customer has wealth = 3 + 2 + 1 = 6
Both customers are considered the richest with a wealth of 6 each, so return 6.

Example 2:

Input: `accounts = [[1,5],[7,3],[3,5]]`
Output: 10
Explanation:
1st customer has wealth = 6
2nd customer has wealth = 10
3rd customer has wealth = 8
The 2nd customer is the richest with a wealth of 10.

Example 3:

Input: `accounts = [[2,8,7],[7,1,3],[1,9,5]]`
Output: 17

Constraints:

- $n = \text{accounts.length}$

Code

JavaAuto

```
1 class Solution {
2     public int maximumWealth(int[][] accounts) {
3         int maxWealth = 0;
4
5         for (int i = 0; i < accounts.length; i++) {
6             int wealth = 0;
7
8             for (int j = 0; j < accounts[i].length; j++) {
9                 wealth += accounts[i][j];
10            }
11
12            if (wealth > maxWealth) {
13                maxWealth = wealth;
14            }
15        }
16
17        return maxWealth;
18    }
19 }
```
